

OXIDES & POWDERS

Diggers Oxides

DESCRIPTION

Diggers Oxides are used as colouring agents for cement mortar, concrete mixes and plaster renders. **Diggers Oxides** provide an even and permanent result with less likelihood of colour loss due to wear and chipping.

TYPICAL USES

- Colouring concrete and mortar mixes
- Dusting concrete driveways, entertainment areas and paths

FEATURES

- Comprehensive range of 9 colours in 10 differing pack sizes from 150g to 25kg
- Colour variations can be achieved by mixing with white or grey cement based products
- Durable and water resistant for internal and external use

APPLICATION

A General Guide for Colouring Concrete

- To achieve a solid colour use 12kg of **Diggers Oxide** per every m³ of concrete.
- Do not use more than 25kg per m³ as the mix will not accept the overdose of oxide.
- Do not add more than 10% of oxide colour to the total cement content eg. if 1m³ of concrete contains 220kg of cement, add 22kg of oxide. For smaller quantities mix 5kg of concrete with no more than 0.5kg of oxide.
- When using a 3 cubic feet, on-site cement mixer you would normally use 10-12kg of pure cement. For a light shade add 300g (3%) of oxide; medium shade 600g (6%); and dark shade no more than 1kg (10%).
- Always measure the amount of oxide, cement, sand and water by weight not by volume.

SAFETY

Wear suitable protective clothing, gloves and eye / face protection when using this product.

Typical Characteristics

Appearancecoloured powder
Solubility in Water insoluble
Melting Point..... >1000°C
Volatiles none

MSDS available
