

ACIDS & CAUSTICS

Potassium Hydroxide Flakes

DESCRIPTION

Potassium Hydroxide Flakes (commonly known as Caustic Potash or KOH) are used in the manufacture of biodiesel. They are also used as an alkaline builder in soap and detergent formulations, in liquid fertilizers that require a highly soluble potassium nutrient value and in the manufacturing of potassium compounds.

FEATURES

Very corrosive white solid material.

Dissolves readily in water to form a strongly alkaline solution.

Potassium Hydroxide Flakes have many other chemical applications in the processing and manufacturing of electroplating, liquid air, perfumes, printing inks, storage batteries and welding rods.

PACKAGING

Potassium Hydroxide Flakes are available in 25kg polypropylene/polyethylene bags.

SAFETY

Please consult the MSDS on **Potassium Hydroxide Flakes** before use.

The information and recommendations contained herein are based on data believed to be correct at this time. However, no guarantee of any kind, expressed or implied is made with respect to the information contained herein.

Typical Characteristics

Appearance	white flakes
Boiling Point.....	1320°C
Melting Point.....	360°C
KOH.....	≥90
K ₂ CO ₃	≥ 0.5
